- Management Studio
- Data Tools

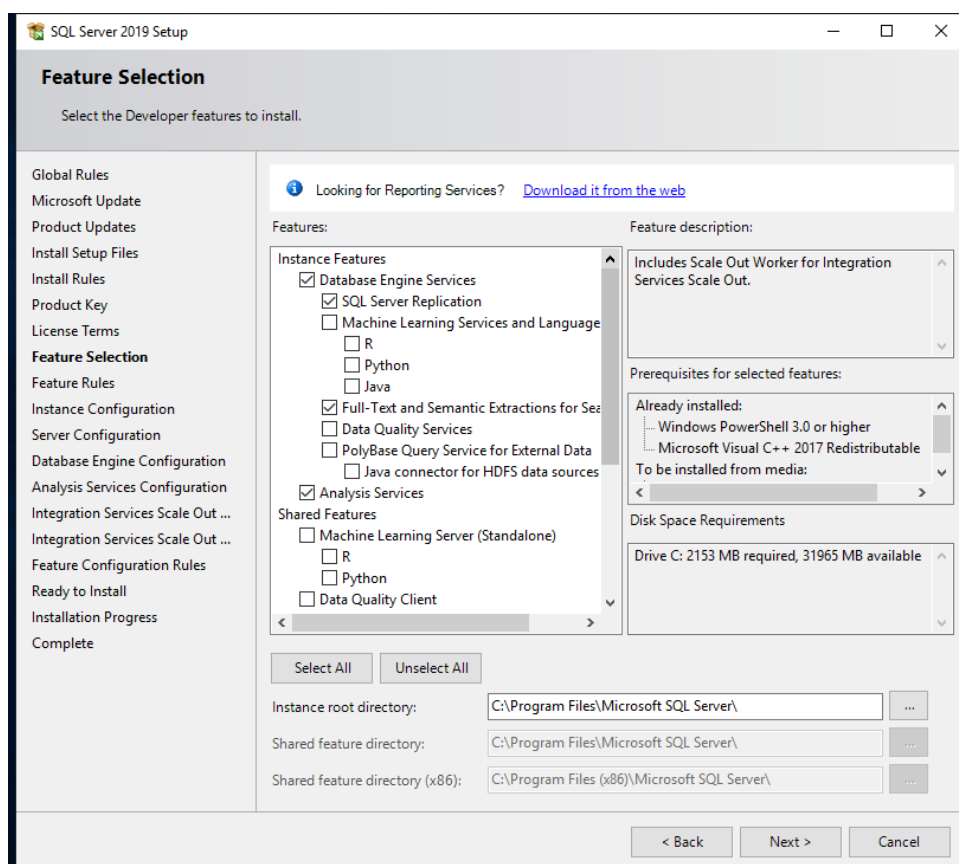

Minimalny wybór komponentów MS SQL

Tworzymy nową instancję (jeśli pierwsza instalacja – domyślną)

The screenshot shows the 'Instance Configuration' window in the SQL Server 2019 Setup. The left sidebar lists various setup steps, with 'Instance Configuration' highlighted. The main area contains options for 'Default instance' (selected) and 'Named instance' (with 'MSSQLSERVER' entered). Below, the 'Instance ID' is also set to 'MSSQLSERVER'. The 'SQL Server directory' and 'Analysis Services directory' are shown with their default paths. At the bottom, there is a table for 'Installed instances' which is currently empty. Navigation buttons '< Back', 'Next >', and 'Cancel' are at the bottom right.

Instance Configuration

Specify the name and instance ID for the instance of SQL Server. Instance ID becomes part of the installation path.

☒ Default instance
☐ Named instance: MSSQLSERVER

Instance ID: MSSQLSERVER

SQL Server directory: C:\Program Files\Microsoft SQL Server\MSSQL15.MSSQLSERVER
Analysis Services directory: C:\Program Files\Microsoft SQL Server\MSAS15.MSSQLSERVER

Installed instances:

Instance Name	Instance ID	Features	Edition	Version
---------------	-------------	----------	---------	---------

< Back Next > Cancel

The screenshot shows the 'Server Configuration' window in the SQL Server 2019 Setup. The left sidebar is similar to the previous window, with 'Server Configuration' highlighted. The main area has tabs for 'Service Accounts' and 'Collation'. Under 'Service Accounts', a table lists various SQL Server services with their respective account names and startup types. Below the table, there is a checkbox for 'Grant Perform Volume Maintenance Task privilege to SQL Server Database Engine Service' with a descriptive note and a link to 'Click here for details'. Navigation buttons '< Back', 'Next >', and 'Cancel' are at the bottom right.

Server Configuration

Specify the service accounts and collation configuration.

Service Accounts Collation

Microsoft recommends that you use a separate account for each SQL Server service.

Service	Account Name	Password	Startup Type
SQL Server Agent	NT Service\SQLSERVERAGENT		Manual
SQL Server Database Engine	NT Service\MSSQLSERVER		Automatic
SQL Server Analysis Services	NT Service\MSSQLServerOLA...		Automatic
SQL Server Integration Services 15.0	NT Service\MsDtsServer150		Automatic
SQL Server Integration Services Sc...	NT Service\SSISScaleOutMast...		Automatic
SQL Server Integration Services Sc...	NT Service\SSISScaleOutWork...		Automatic
SQL Full-text Filter Daemon Launc...	NT Service\MSSQLFDLauncher		Manual
SQL Server Browser	NT AUTHORITY\LOCAL SERV...		Disabled

☐ Grant Perform Volume Maintenance Task privilege to SQL Server Database Engine Service

This privilege enables instant file initialization by avoiding zeroing of data pages. This may lead to information disclosure by allowing deleted content to be accessed.

Wybieramy uwierzytelnienie Mixed mode, podajemy hasło dla użytkownika sa oraz dodajemy przynajmniej Current user

The screenshot shows the 'Database Engine Configuration' window in the SQL Server 2019 Setup. The left sidebar lists various setup steps, with 'Database Engine Configuration' currently selected. The main area has tabs for 'Server Configuration', 'Data Directories', 'TempDB', 'MaxDOP', 'Memory', and 'FILESTREAM'. The 'Server Configuration' tab is active, showing options for authentication mode. The 'Mixed Mode (SQL Server authentication and Windows authentication)' option is selected. Below this, there are fields to enter and confirm a password for the SQL Server system administrator (sa) account. At the bottom, there is a list of SQL Server administrators, with 'DESKTOP-H52F7LU\adamp (adamp)' selected. To the right of the list, a message states: 'SQL Server administrators have unrestricted access to the Database Engine.' At the bottom of the window, there are buttons for '< Back', 'Next >', and 'Cancel'.

Wybieramy Multidimensional model and Data Mining oraz dodajemy Current user do autoryzacji w Analysis Services

The screenshot shows the 'Analysis Services Configuration' window in the SQL Server 2019 Setup. The left sidebar lists various setup steps, with 'Analysis Services Configuration' currently selected. The main area has tabs for 'Server Configuration' and 'Data Directories'. The 'Server Configuration' tab is active, showing options for server mode. The 'Multidimensional and Data Mining Mode' option is selected. Below this, there is a list of users with administrative permissions for Analysis Services, with 'DESKTOP-H52F7LU\adamp (adamp)' selected. To the right of the list, a message states: 'Analysis Services administrators have unrestricted access to Analysis Services.' At the bottom of the window, there are buttons for '< Back', 'Next >', and 'Cancel'.

Specify a port number that the master node uses to communicate with the worker nodes.

Port Number:

Select a SSL certificate that is used for the communication between the master node and worker nodes in the scale out topology. A default self-signed certificate is created if you choose to create a new SSL certificate.

☒ Create a new SSL certificate

CNs in the certificate:

☐ Use an existing SSL certificate

Provide the master node endpoint which the worker node needs to connect to (e.g. https://[MasterNodeMachineName]:[Port]):

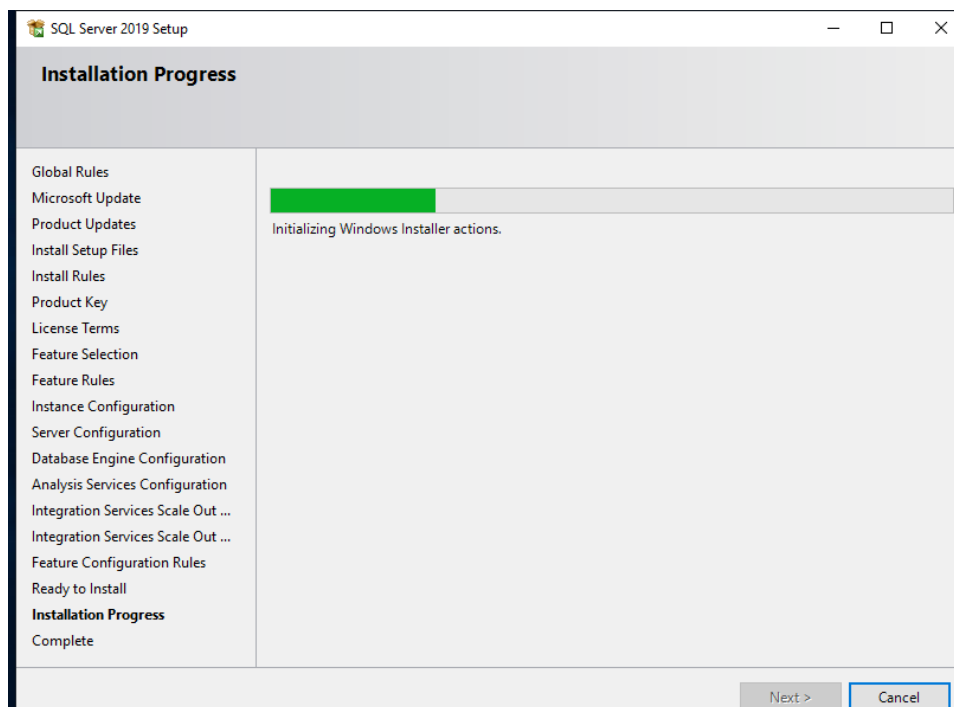

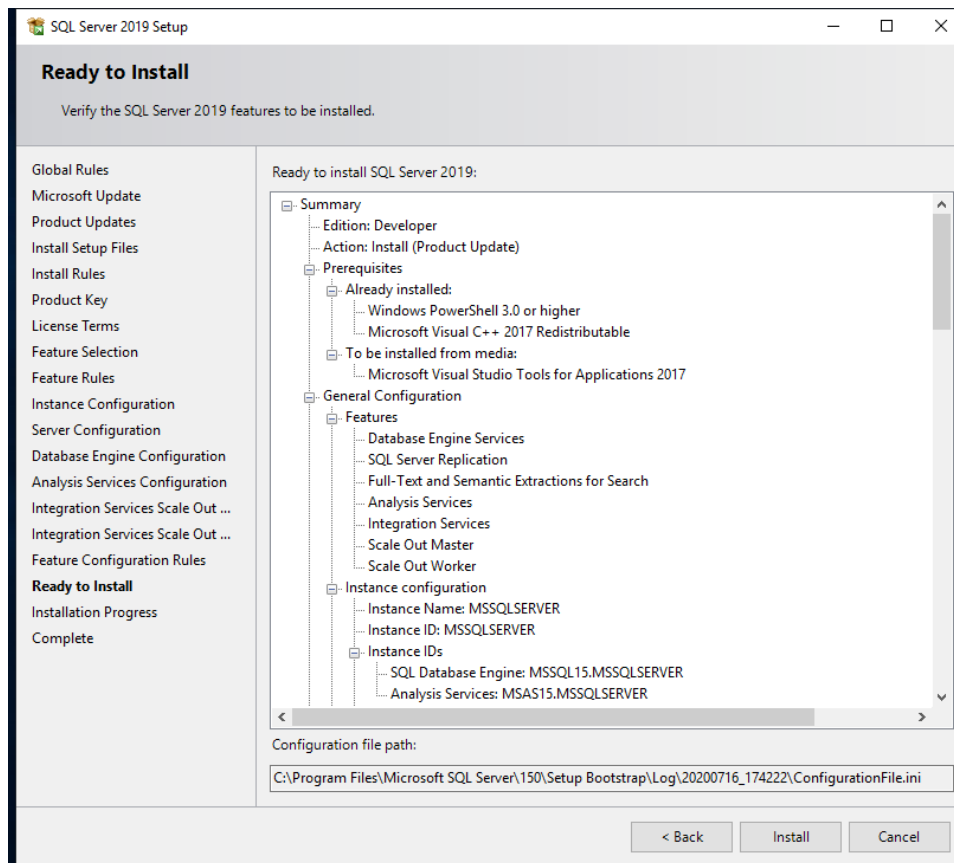

Configure the SSL certificate of master node to trust in this machine. The master's SSL certificate needs to be trusted on this worker node for establishing the connection between worker and master. This is optional if your master certificate has already been trusted, i.e. it's issued by a trusted CA (Certification Authority) on this machine, or the master is installed on the same machine. Otherwise, please provide the master's client SSL certificate, i.e. the certificate is created and self-signed by yourself and the master is not on the same machine.

INSTALACJA DATA TOOLS

The screenshot shows a web browser window with the URL <https://docs.microsoft.com/en-us/sql/ssdt/download-sql-server-data-tools-ssc>. The page is titled "Download SQL Server Data Tools (SSDT) for Visual Studio". On the left, there is a sidebar with a "Version" dropdown set to "SQL Server 2019" and a "Filter by title" search bar. Below the search bar, a list of links is shown, with "Download SSDT" highlighted. The main content area features the title "Download SQL Server Data Tools (SSDT) for Visual Studio" in large bold text, followed by the date "02/20/2020", a reading time of "6 minutes to read", and a list of user avatars. Below this, the section "In this article" contains several links: "SSDT for Visual Studio 2019", "SSDT for Visual Studio 2017", "SSDT for VS 2017 (standalone installer)", "Offline install", "Supported SQL versions", "DacFx", "Previous versions", "See Also", "Next steps", and "Get help". At the bottom, the "APPLIES TO:" section lists "SQL Server", "Azure SQL Database", and "Azure Synapse" with green checkmarks.

APPLIES TO: SQL Server Azure SQL Database Azure Synapse

The screenshot shows the same web browser window, but the page is titled "SSDT for VS 2017 (standalone installer)". The sidebar on the left is the same, but the "Filter by title" search bar is now empty, and the list of links is expanded to show more options, including "SqlPackage.exe", "SQL Server Profiler", "Visual Studio native helpers", "Extended Features", and "Visual Studio Code". The main content area features the title "SSDT for VS 2017 (standalone installer)" in large bold text, followed by a download icon and the text "Download SSDT for Visual Studio 2017 (15.9.5)". Below this, the section "Important" contains a list of bullet points: "Before installing SSDT for Visual Studio 2017 (15.9.5), uninstall Analysis Services Projects and Reporting Services Projects extensions if they are already installed, and close all VS instances.", "Removed the inbox component Power Query Source for SQL Server 2017. Now we have announced Power Query Source for SQL Server 2017 & 2019 as out-of-box component, which can be downloaded here.", and "To design packages using Oracle and Teradata connectors and targeting an earlier version of SQL Server prior to SQL 2019, in addition to the Microsoft Oracle Connector for SQL 2019 and Microsoft Teradata Connector for SQL 2019, you need to also install the corresponding version of Microsoft Connector for Oracle and Teradata by Attunity." The last two bullet points have sub-bullets: "Microsoft Connector Version 5.0 for Oracle and Teradata by Attunity targeting SQL Server 2017" and "Microsoft Connector Version 4.0 for Oracle and Teradata by Attunity targeting SQL Server 2017".
